INVESTOR DECK · MARCH 2026

Building and implementing the *AI workforce* for every business.

Kwanda deploys AI workforces for businesses. From first consultation to production-ready agents.

"For the CEOs, the question is, what's your OpenClaw strategy? We need it. [...] Every company in the world today needs to have an OpenClaw strategy, an agentic systems strategy."

JENSEN HUANG, CEO NVIDIA · MARCH 2026

THE PROBLEM

Every business knows they need AI. Almost none can implement it.

> *"95% of enterprise AI projects fail because big companies can't build them. The opportunity is huge for startups that can help enterprises implement AI."*
>
> — Y COMBINATOR

Skills Gap

AI talent is scarce and expensive. Most businesses can't hire or retain it at any meaningful scale.

Implementation Gap

Point tools like ChatGPT don't solve business processes. Real workflow integration is hard and specialised.

Trust Gap

Companies don't know where to start, what to buy, or who to trust with their AI transformation.

THE MARKET

An underserved SMB market with no dominant implementation layer.

Enterprise players (Accenture, Deloitte) focus exclusively on Fortune 500. SMBs and mid-market businesses are massively underserved.
AI-native agencies don't yet exist at scale.

$500B+

Global AI services market by 2030, growing at ~35% YoY

85%

Of businesses stuck in AI pilots, unable to move to production

$0

Dominant mid-market AI implementation platform. The category is wide open

OUR SOLUTION

From strategy to deployed agents. From consulting revenue to recurring revenue.

Kwanda is an AI-native consultancy and product studio that has built and deployed agentic solutions.
We deploy our own proprietary technology as solutions to problems we have been consulted to solve.

THE CONSULTANCY

- We redesign business workflows around AI agents.
- High-value project fees and monthly retainers.
- Every engagement generates cash, customer trust, and implementation insight.

→

THE PRODUCT

- Our proprietary platform deploys production-ready AI agents into the customer's real operating environment
- Recurring subscription revenue per agent deployment
- Each consulting engagement becomes a distribution channel for the product

The consultancy sells the solution. The product solves it permanently.

TIMING

The market forces are behind Kwanda.

01

Businesses need help implementing AI

"The mid-market implementation gap represents an $18 billion opportunity. Consulting firms are succeeding by turning AI anxiety into paid transformation projects."

— Guillermo Flor, Tech Analyst

02

AI-native consultancies are the new category

"Historically, agencies were hard to scale because growth required a 1:1 increase in headcount. AI changes that. Instead of selling 'hours' to help customers use software, the new breed of agencies uses their own proprietary AI tools to sell the finished product at 100x the efficiency."

— Y Combinator, Request for Startups 2026

03

AI agents deployed into business is the model

"I am fired up about vertical AI agents because I think people… are not fully appreciating just how big vertical AI agents are going to be… There will be $300B+ companies started just in this one category."

— Jared Friedman, Y Combinator Managing Partner

The AI-native consultancy-to-distribution channel of proprietary product distribution hits all the key market trends.

THE PLATFORM

Deploy a full AI workforce.
Managed agents for real operations.

Configurable agent personality

Our personality dashboard makes it possible to configure the personality of each agent on a granular level. Breathe life into your agent and give it the personality it needs to complete the role you assign it.

Kwanda Ops

A proprietary collaboration surface that enables seamless human–agent interaction, allowing you to manage what tasks your agent handles, set its priorities and observe how it goes about its work, giving you full visibility into your AI workforce.

Iron-clad security

Kwanda maintains agent security by exposing its architecture to continuous prompt injection attacks and deploys agents with built in safeguards.

Best-in-class memory

Kwanda deploys its proprietary best-in-class Cortex system to radically improve agent memory. Cortex ranks third in the world on the LongMemEval Benchmark.

BUSINESS MODEL

Two revenue streams. One reinforcing flywheel.

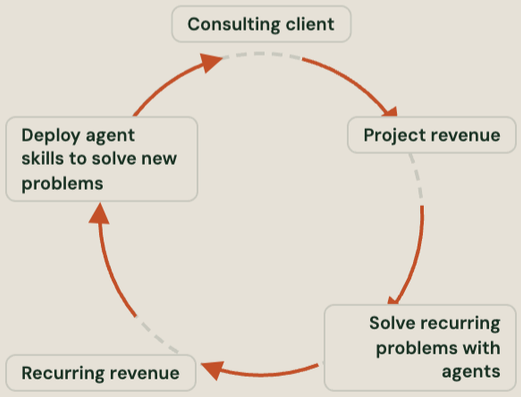
Kwanda is not juggling two unrelated businesses. It is using one revenue stream to strengthen the other.

CASH + LEARNING

Consulting

- Project fees and monthly retainers.
- High-value, high-trust entry point.
- Generates cash flow, customer access, and implementation learning.

THE FLYWHEEL



RECURRING + SCALABLE

Platform

- Subscription per deployment or agent workforce.
- Managed support and maintenance.
- Expansion through added agents, modules, and skills.

THE TEAM

Operators, builders and founders. *All in.*

Kieran Donnelly

CO-FOUNDER

Accomplished solopreneur and technologist with BSc engineering and MSc data science degrees. Founded drone videography agency Sky Reel and AI automation consultancy Why Content. 5+ years at ExploreAI educating 1,000s of data science students, and a stint at Sony in Sweden working on computer vision algorithms.

Chris Immelman

CO-FOUNDER

BComm LLB & Admitted Attorney. Spent five years scaling a South African Fintech from public release to over 80,000 customers, $14M in transaction value covering over 2 million transactions. Secured and managed corporate clients including MiWay, OUTsurance, PayJoy, Tygerwheel & Tyre, Pepkor and +20 others.

Adii Pienaar

STRATEGIC PARTNER · UBUNDI

4x Founder including WooCommerce, the world's second biggest ecommerce platform now valued at +$3 billion. Currently founder of Ubundi, an AI-centric venture studio shipping AI solutions.

Ubundi Studio

6 AI/ML ENGINEERS + DESIGNER

Kwanda is backed by Ubundi, a Stellenbosch-based AI-centric venture studio.

6x AI, ML and Data Science engineers + senior product designer providing deep technical understanding and backing to Kwanda.

Dean Jeggels

AI AUTOMATION ENGINEER

M.Eng mastering in Electrical Engineering. Experience in AI automations across various businesses.

Jonty Rule

ML & DATA ENGINEER

M.Eng specialising in Data and Machine Learning. Deep understanding of RAG and vector database deployments.

GO TO MARKET

Consulting is our distribution engine.

Kwanda acquires customers by solving painful, high-value operational problems first — then expanding from implementation into platform adoption.

PHASE 01

Land with consulting

Target mid-market businesses in sectors where workflows are expensive, repetitive, and operationally important: finance, logistics, professional services, and e-commerce.

PHASE 02

Convert to platform

Each engagement becomes a structured path to deployed agents, recurring support, and platform usage.

PHASE 03

Scale through product and partners

Expand via referrals, repeatable vertical playbooks, and channel partners such as IT consultants, accountants, and implementation agencies.

OUR EDGE

Built on AI tools from the ground up.
Why Kwanda wins.

AI-native delivery DNA

Every engagement is designed around agent-first outcomes, not manual consulting hours.

Integrated model

Consulting, deployment, and software reinforce each other. Competitors usually have one, not all three.

Engineering depth

Kwanda can ship faster because it draws on both its own team and proven studio technical capacity.

Managed dependency

Once deployed, customers rely on Kwanda for maintenance, upgrades, observability, and new capabilities.

Category position

Kwanda is not another chatbot tool or generic dev shop. It is positioning itself as the implementation layer for agentic systems.

Clean slate advantage

Kwanda is built from the ground up on AI-first principles. There are no legacies to re-invent. We're super-charged by AI from day one.

THE VISION

Every business will run an AI workforce.

Kwanda will deploy it.
